

Boosting Cat Adoptions:

Predicting Outcomes of Cats at the Austin Animal Center

Rob Pagano

Cats in Shelters: *Yearly Totals, US*

- 3.4 million cats brought to shelters
 - 1.4 million are euthanized
 - 1.3 million are adopted
 - 700k left in shelters

Austin Animal Center

- 2010 - “No Kill Implementation Plan”
- Largest no-kill shelter in the US
 - Accepts cats, dogs, birds, reptiles, and others

Adoptions and Transfers

Cats: Oct 2013 - Present

Outcome	Adoption	Transfer
Total Outcomes	~13.5k	~15k
Median Stay	27 Days	2 Days

Goals and Methodology

→ Build a Model

Utilize intake and outcome data from Austin's data portal to train a classification model to predict outcomes

→ Gain insight

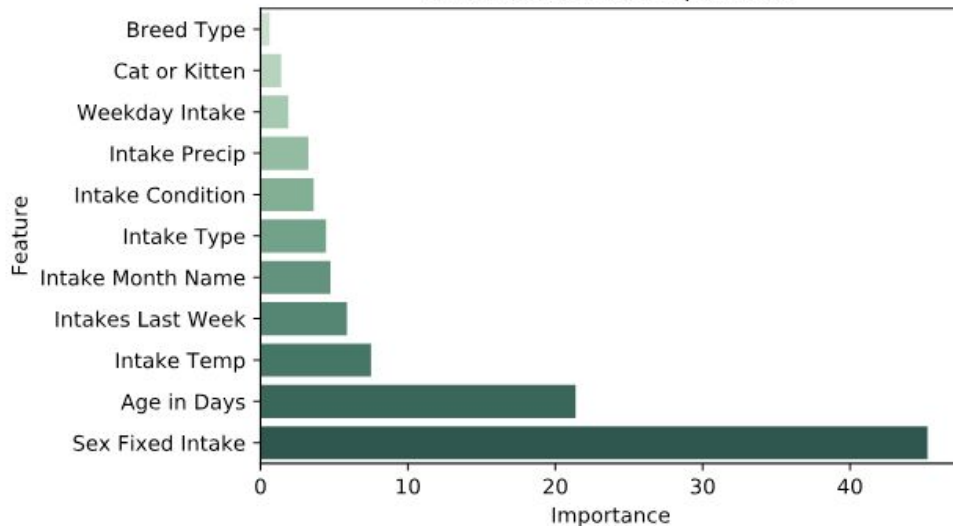

What attributes of an animal at intake are most important when predicting whether they will be transferred or adopted

→ Create a Flask App

Automate the process of figuring out where animals should be brought, instead of bringing them in and immediately transferring them

Winning Model - CatBoost Classifier

CatBoost Feature Importance

Metric	Score
Accuracy:	0.748
Precision:	0.771
Recall:	0.728

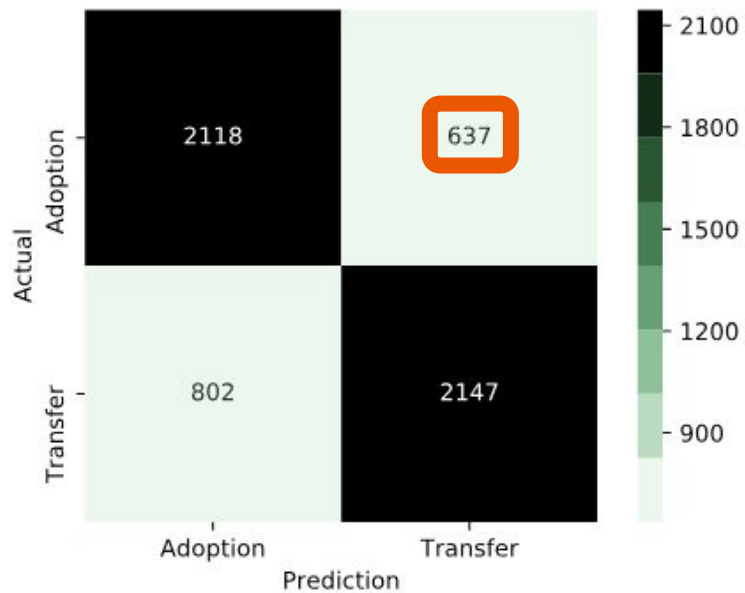

Confusion Matrix

0.5 Probability Threshold

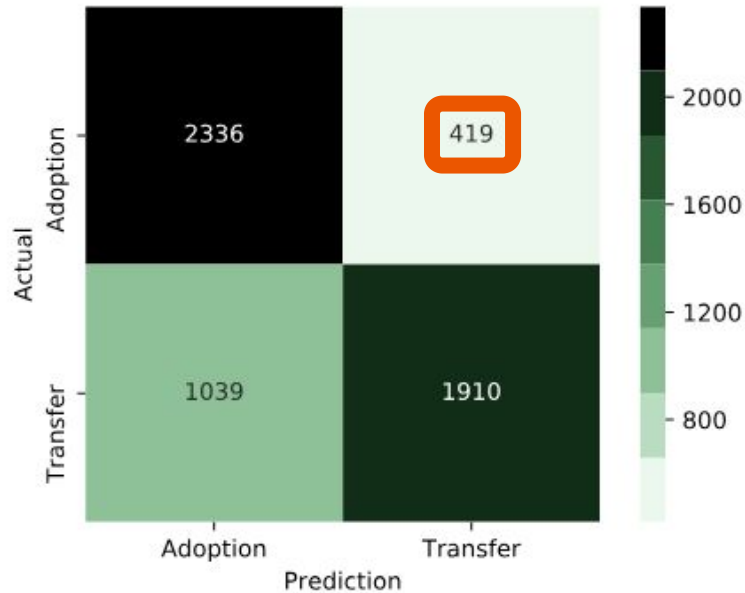

Confusion Matrix

0.5 Probability Threshold

0.6 Probability Threshold

Future Work

- Flask - work in progress
 - Some information would need to be automated / populated by shelter
- Add observations as more data comes in to further train model
- Utilize this project to make similar model for dogs, etc.

Cat Outcome Predictions at AAC

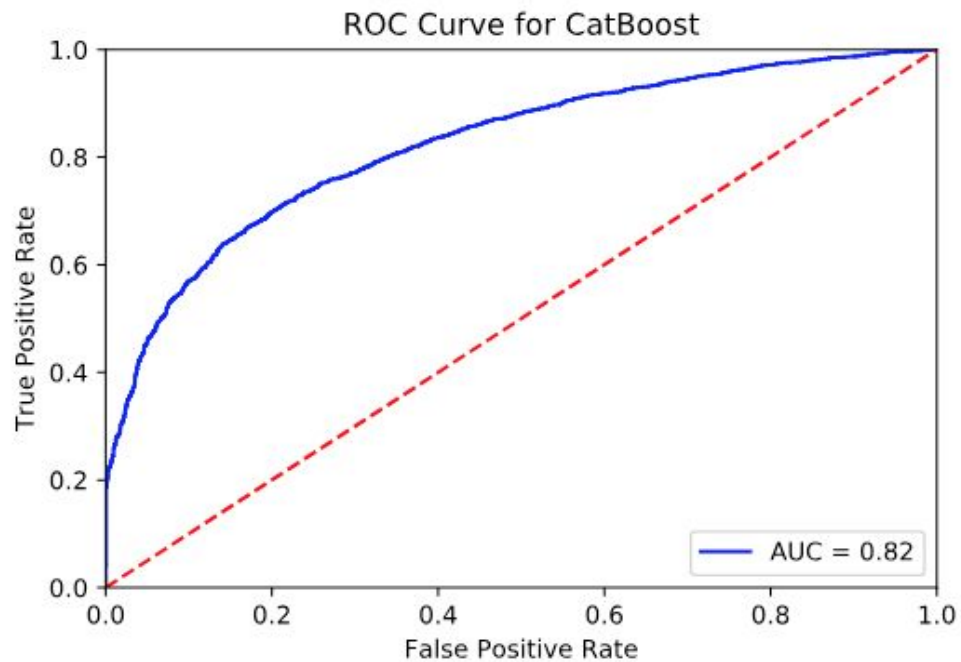

Intake Type	<input type="text" value="Stray"/>
Intake Condition	<input type="text" value="Normal"/>
Sex and Fixed	<input type="text" value="Neutered Male"/>
Intake Month	<input type="text" value="January"/>
Day of Week	<input type="text" value="Thursday"/>
Temperature	<input type="text" value="85"/>
Precipitation	<input type="text" value="0"/>
